

# O-Insights™

## BACnet Plugin

### Overview:

O-Insights BACnet Plugin is a windows-based software, that interfaces the MOBOTIX HUB Server and camera details with the building's automation software supporting the BACnet protocol, over which the alarms and events can be shared seamlessly.

The O-Insights BACnet plugin has an easy to use GUI to create the BACnet objects from the list of Server and Cameras list.

The addition or deletion of the cameras in the system can be updated by running the BACnet object creation tool.

The new configuration of the server has to be updated by running the BACnet object creation tool. All these modifications can be done on the fly without any downtime of the system.

### Minimum Server Requirements

#### CPU:

Intel® Core™ i5 or better

#### RAM:

8GB or 16GB & more for large systems

#### Network:

Ethernet 100 Mbit or better

#### Hard Disk:

1 GB or more free

#### Operating system:
